Large-scale Evacuation Modelling Applied to Wildfires End-user Requirements

BIO:

David is an environmental scientist with a strong interest in wildfire management. His areas of specialisation are biodiversity management and integrated fire management, the latter concerned with both the ecological and the operational management of wildfire incidents. Since 2016, he is doing a PhD research in the field emergency evacuation management at the University of Greenwich (UK), contributing to the development of evacuation simulation models applied to wildfire hazard situations. In addition, he works at Pau Costa Foundation as a project officer where he is mainly involved in the management R+D+I projects.
